

Assignment-3

Description

We have implemented the reader writer problem using shared queue, we have used 3 c programs initialize.c, reader.c and writer.c, in one program i have handled the reader file, in one i have handled the writer file and in one i have used the initialize the shared memory.

How to take input

We first initialize the variables by calling ./initialize
And then declare run ./writer and then ./reader

Error case handled

When a writer writes it shows that writer cannot write
